# Wi-Fi Control – Customised Control and Monitoring

---

Mitsubishi Electric Wi-Fi Control gives you the freedom to manage your heat pump(s) through your smart phone, tablet or online account, no matter where you are. On the way home, running late, coming home early, or even when you're in a different country, Wi-Fi Control offers innovative real time management to suit your lifestyle. Now you'll always arrive home to total comfort regardless of what New Zealand's unpredictable weather is doing outside!

## Not just when you're away.

Mitsubishi Electric Wi-Fi Control offers more than being able to simply preheat or precool rooms before you arrive home. Wi-Fi Control opens up a new world of truly personalised comfort. Effectively replacing your traditional heat pump remote, Wi-Fi Control gives you the freedom to manage your home environment regardless of where you are.

## A perfect night's sleep.

Now you can continue to monitor and control your heat pump from the comfort of your couch. Off to the bedroom in half an hour but not sure how cold it is? Wi-Fi Control tells you the actual bedroom temperature so you can preheat or precool your bedroom remotely for a perfect night's sleep.

## A warm wake-up on frosty mornings.

Wi-Fi Control is also great for preheating your living room before you have to get up in the morning. It will make those early frosty morning starts just that little bit easier to face.

## Intelligent central control for multiple rooms.

Mitsubishi Electric Wi-Fi Control is not limited to only managing one heat pump at a time. It truly is an intelligent multitasker. With the purchase of additional adaptors, multiple indoor units can now be seamlessly monitored and controlled. Simple, yet effective centralised control at your fingertips.

## Not just residential, commercial too.

Mitsubishi Electric Wi-Fi Control has been successfully integrated in numerous commercial buildings including offices, motels, and hotels. The ability to provide seamless real time centralised heat pump control as well as unlocking the potential to more energy efficient operation are key drivers for building managers to embrace this new technology.

### Multiple units, one app.

Mitsubishi Electric Wi-Fi Control gives you the ability to control the heating and cooling needs of multiple units not just in the same home or building, but across a number of different locations. Your own home, a holiday home and the office – it can all be controlled and customised through one app. Furthermore, you can now Group Control multiple units all at once for consistent comfort.

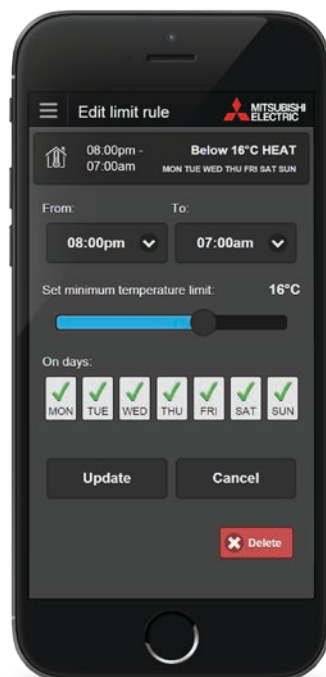

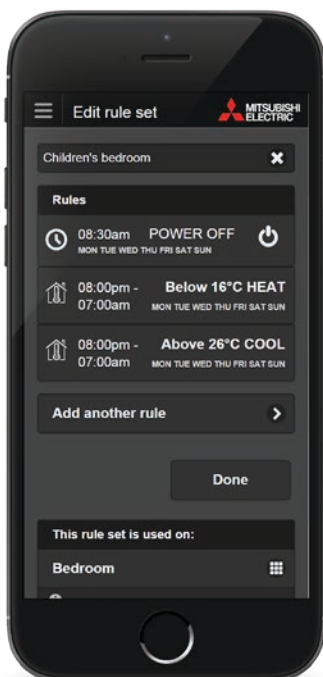

### Be smart, be efficient.

Forgot to turn off your heat pump? Heat pumps mistakenly left running can quickly be identified at a glance and simply be turned off, no matter where you are.

### Energy saving, optimised.

When connected to a compatible Mitsubishi Electric Ducted System complete with optional Mitsubishi Electric Zone Control, Wi-Fi Control unlocks expanded functionality and interaction to deliver the very best in advanced energy optimisation. Now you can control and monitor which areas / zones your ducted heat pump is controlling in real time from absolutely anywhere. Meanwhile overall energy savings can be optimised at the touch of a button to ensure heat energy is directed only to where it is needed most.

### Much more than a 7 Day Controller.

#### Advanced Temperature Management.

Because Wi-Fi Control reflects the real time room temperature at any time, the unique rule setting functionality allows you to customise a minimum and maximum temperature range. The result - maintaining the perfect temperature for total comfort.

#### Set Room Temperature Limits.

Wi-Fi Control is ideal for families with children. Imagine no longer needing to physically walk down to each individual bedroom to check the temperature and turn a heat pump on or off using the hand held remotes, potentially interrupting the sleep of children. Simply apply a min/max temperature rule and let Wi-Fi Control do the rest.

1 Either choose to edit an existing rule or create a new one.

2 Customise to make your heat pump work as you want it to.

# Wi-Fi Control: At a glance

#### Modes

Power unit on/off & select desired mode.

#### Temperatures

Monitor the current room temperature and set to desired temperature.

#### Fan Speed & Airflow

Adjust the intensity of the fan speed and choose a specific direction or swing.

**INNOVATION EXCELLENCE**  
2014

Award winning across the range.

Awarded the Canstar Innovation Award 2014, Mitsubishi Electric Wi-Fi Control has been recognised as a game changing technology that has the potential to significantly change peoples lives. Wi-Fi Control is compatible with all Mitsubishi Electric domestic High Wall, Floor Console and Ducted Systems.

Developed in New Zealand, for New Zealand.

True Active Wi-Fi Control evolved through the realisation that the humble traditional Passive Infrared Remote Control no longer keeps up with the busy lives of New Zealanders. Why should being away from home or simply being in a different room, stop your control of your comfort needs? Mitsubishi Electric Wi-Fi Control has changed all that. And because it is locally designed, new features and functionalities will continue to be added, based on what New Zealanders really want.

#### Minimum Requirements for Operation

You will require the following components to upgrade your Mitsubishi Electric High Wall, Ducted System, or Floor Console Heat Pump to include award winning Wi-Fi Control.

1. Compatible WPA2-AES capable router with both WPS and 2.4GHz band enabled. The wireless network coverage must include the heat pump installation location.
2. A PC or Tablet/Smartphone that is iOS/Android compatible.
3. A compatible Mitsubishi Electric Heat Pump with a MAC-558-IF-E Adaptor. Visit [www.mitsubishi-electric.co.nz/wifi](http://www.mitsubishi-electric.co.nz/wifi) for a full list of minimum requirements and owner's responsibilities.
